Qorgan

AWARDX INTERNATIONAL 26 · APPLICATION

Ask for help without taking out your phone.

A personal-safety system: a mobile app and a discreet bracelet. Hold the button for two seconds and your location and audio reach the people who can help.

Merey Mamyrova & Tomiris Jaxylykova · Shymkent, Kazakhstan

THE PROBLEM

When it matters, a phone is too slow.

17,200+

domestic-violence reports to Kazakhstan police in the first quarter of 2025 alone

51%

of women who experienced partner violence never told anyone (UN survey, 2018)

840M

women worldwide have faced partner or sexual violence (WHO)

Asking for help takes four steps: Unlock · Open an app · Dial · Speak

Sources: Ministry of Internal Affairs of Kazakhstan via The Astana Times (2025); UN sample survey (2018); WHO

THE SOLUTION

Three moves, no screen needed.

1. Hold

Press the bracelet button for two seconds. It vibrates once the app confirms.

2. Alert

Live location and audio go to trusted contacts in Telegram. They need no app.

3. Nearby help

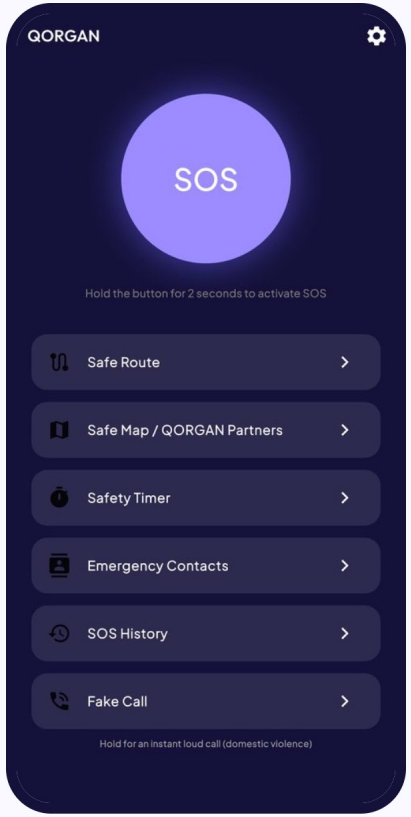

Qorgan users within 500 m are alerted. Partner venues are marked as safe places.

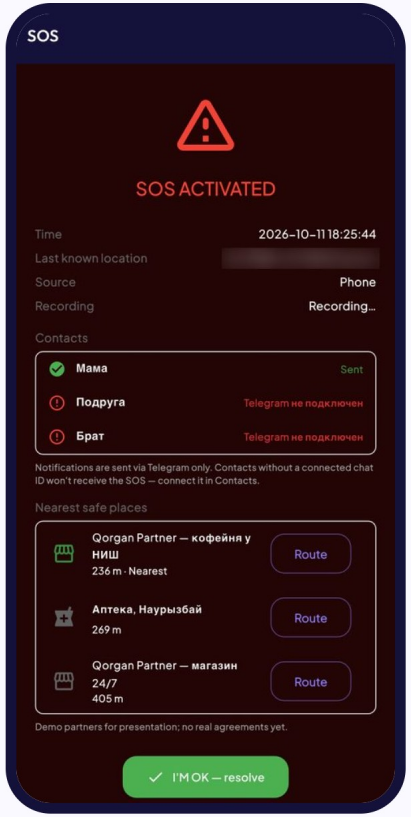

THE PRODUCT

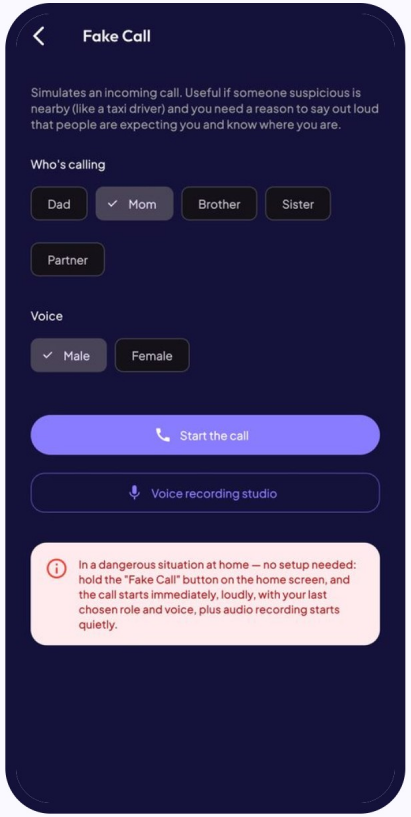

Both halves work today.

Finished bracelet: SOS button, vibration motor and pulse sensor in a 3D-printed case.

FEATURES

Six tools, one calm interface.

SOS in two seconds

Hold the button: location and audio start, contacts are alerted.

Alerts in Telegram

Contacts need no Qorgan app, only Telegram.

Fake call

A call in a loved one’s voice. Hold the button for an instant loud call.

Safety timer

No confirmation in time means contacts are alerted.

Nearby SOS alert

Qorgan users within 500 m are alerted.

Safe Route

Walking route scored by distance to verified Partners, police and pharmacies.

Also built: SOS history, low-battery alert and an interface in English, Russian and Kazakh.

THE BRACELET

One press, no screen.

ESP32-C3
Bluetooth LE to the phone

Pulse sensor
MAX30102, streamed live

Vibration
Confirms the alert was sent

250 mAh
USB-C charging

3D-printed
Case and adjustable strap

$12–18
Build cost per unit

GPS, microphone and internet stay in the phone, which keeps the bracelet small and cheap. Next form factor: a ring.

MARKET

We start with 678,100 students.

$0.4B
TAM · GLOBAL, PER YEAR

5.8B mobile users × 30% aged 15–34 × 2% adoption × $12 a year

$2.3M
SAM · KAZAKHSTAN, PER YEAR

678,100 university students × $3.40 recurring revenue per user (5% pay $48 for Premium, universities pay $1 per student)

$16,200
SOM · YEAR ONE, SHYMKENT

3,000 users: 150 Premium × $48, universities $1 × 3,000, 300 bracelets × $20

Sources: Bureau of National Statistics of Kazakhstan, 2025/26; third-party market reports (about $2.0B in 2026)

COMPETITION

Others alert contacts. We build a network.

	Typical safety products	Qorgan
Who is alerted	Pre-chosen contacts, who may be far away	Contacts, plus Qorgan users within 500 m
Recipient needs	Often their own app account	Only Telegram, connected once
Trigger	Phone app, or a paid dispatch call	Bracelet button, no phone in hand
Where it launches	Country-specific dispatch integrations	Any city with local venues and users

Our hardest challenge is the cold start, so we launch campus by campus.

BUSINESS MODEL

Free SOS, paid extras, paying institutions.

PREMIUM

$4 /month

Longer audio and location history, more contacts, safety-weighted routes. We assume 5% of users convert.

INSTITUTIONS

$1 /student/yr

Universities and dormitories pay for safety coverage and verified safe points. Partner venues pay a small fee.

BRACELET

$20 vs $15 cost

Sold near cost to drive adoption. About $5 margin per unit.

Break-even About $500 a month in running costs: 125 Premium subscribers, or one university contract covering 6,000 students.

All prices are hypotheses we will test in the pilot. Core SOS stays free.

TRACTION

Built. Recognized. Now validating.

Built

Flutter app for Android and iOS in Kazakh, Russian and English

Finished bracelet, tested end to end over Bluetooth

Bilingual website with a waitlist

Recognized

Won our school's internal selection

Network stage of Kazakhstan's Republican Scientific Projects Competition, 27–30 October 2026

Validation

59 students surveyed

20 test users, 3 seconds average SOS time

120 waitlist sign-ups

7 venues willing to partner

Revenue: none yet. Next: a pilot in Shymkent.

ROADMAP

The next six months.

MONTHS 1–2

Validate

Tests with 20–30 users, a student survey and written interest from partner venues.

MONTHS 3–4

Launch

Public app release, 10 partner venues and a first university pilot in Shymkent.

MONTHS 5–6

Scale

A first series of 100–300 bracelets and the Premium plan.

$5,000 would fund about 300 bracelets at a $15 build cost, enough for a full campus pilot.

TEAM

Two students, both halves of the product.

M

Merey Mamyrova

CO-FOUNDER · APP

Flutter app: SOS flow, Telegram alerts, safety timer, fake call, Bluetooth link, three languages.

T

Tomiris Jaxylykova

CO-FOUNDER · HARDWARE

The bracelet: ESP32 board, button, vibration motor, pulse sensor and a 3D-printed case.

Students from Shymkent, Kazakhstan. We studied seven competing products before building our own.
